

# GROW YOUR CAREER and MAKE A DIFFERENCE

NOAA's Office for Coastal Management offers two fellowship programs, each designed to create the next generation of leaders. Fellowship projects contribute to the federal agency's ongoing efforts to address the coastal challenges of today and tomorrow.

NOAA's Office for Coastal Management is committed to making coastal fellowships available to all interested and eligible candidates and removing the barriers that would lessen each fellow's ability to become a part of the next generation of coastal leaders.

## Coastal Management Fellowships

### Fellowship Opportunities

- *Coral Reef Management Fellowship*
- *Margaret A. Davidson Graduate Fellowship*

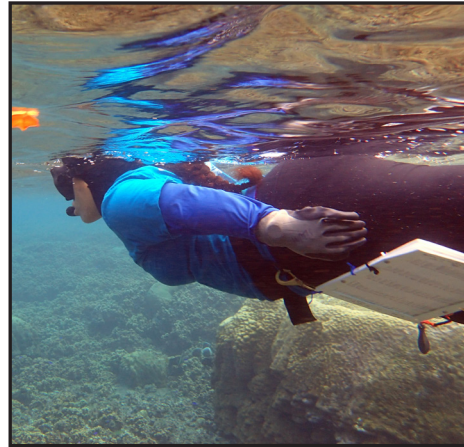

### Coral Reef Management Fellowship

This fellowship provides state and territorial [coral reef management agencies](#) with highly qualified candidates ready to expand the work of the Coral Reef Conservation Program.

- This is a two-year program.
- Seven fellows are chosen every other year.
- Applicants must have an undergraduate degree.
- Projects are focused on applied science. Topics include climate change, land-based sources of pollution, fishing impacts, and coral reef restoration.

### Margaret A. Davidson Graduate Fellowship

This is the newest fellowship program, and is focused on research in social or natural sciences and collaboration with local experts and communities.

- This is a two-year program.
- One fellow is selected every other year to work at one of the 30 [national estuarine research reserves](#).
- Applicants must be current master's or doctoral degree students.
- Projects include field research that communities use to develop results-oriented approaches for addressing coastal challenges.
